

SESLHD PROCEDURE COVER SHEET

Health
South Eastern Sydney
Local Health District

NAME OF DOCUMENT	Clinical Handover: Implementation of ISBAR Framework and Key Principles
TYPE OF DOCUMENT	Procedure
DOCUMENT NUMBER	SESLHDPR/303
DATE OF PUBLICATION	September 2024
RISK RATING	Medium
LEVEL OF EVIDENCE	National Safety and Quality Health Service Standards: Standard 6 - Communication for Safety NSW Health PD2019_020 Clinical Handover
REVIEW DATE	September 2027
FORMER REFERENCE(S)	SESIAHS Business Rule - Local implementation of Clinical Handover –standard key principles
EXECUTIVE SPONSOR	Director, Clinical Governance and Medical Services
AUTHOR	Ashley Azzopardi Clinical Governance Officer, Clinical Governance Unit
POSITION RESPONSIBLE FOR THE DOCUMENT	Ashleigh Webster Patient Safety Lead, Clinical Governance Unit Ashleigh.Webster@health.nsw.gov.au
FUNCTIONAL GROUP(S)	Clinical Governance
KEY TERMS	Clinical Handover, ISBAR, Key Principles
SUMMARY	This procedure describes instructions for clinical staff for clinical handover implementing the ISBAR Framework, Key Principles of Clinical Handover and National Safety and Quality Health Service Standard 6 - Clinical Handover.

COMPLIANCE WITH THIS DOCUMENT IS MANDATORY

**This Procedure is intellectual property of South Eastern Sydney Local Health District.
Procedure content cannot be duplicated.**

Feedback about this document can be sent to SESLHD-Policy@health.nsw.gov.au

**Clinical Handover: Implementation of ISBAR
Framework and Key Principles****SESLHDPR/303****1. POLICY STATEMENT**

Clinical handover refers to the transfer of responsibility amongst clinicians to ensure continuity of care whilst ensuring a smooth transition of accountability to a different clinician, clinical team, service or facility.

South Eastern Sydney Local Health District ensures that clinical handover undertaken by all staff working within the District follow the Key Principles for safe and effective clinical handover as mandated by the [NSW Ministry of Health Policy Directive PD2019_020 - Clinical Handover](#), and the requirements under National Safety and Quality Health Service (NSQHS) Standard 6 - Communication for Safety.

2. BACKGROUND

This procedure outlines how South Eastern Sydney Local Health District implements the Key Principles and meets the requirements of the NSQHS Standards.

As a minimum, all clinical services are responsible for ensuring that standardised work practices for clinical handover are developed for the key handover interfaces identified in Table 1 and ensuring clinical handover processes comply with NSQHS Standard 6 – Communicating for Safety.

3. RESPONSIBILITIES

This procedure applies to all SESLHD facilities and streams, inclusive of all clinical disciplines.

3.1 General Managers will:

Ensure there are systems in place for the implementation of the SESLHD Procedure described below and the actions required to meet the key handover interfaces listed in Table 1.

3.2 Department Managers will:

Ensure effective implementation of the SESLHD Procedure described below and the actions required to meet the key handover interfaces listed in [Table 1](#).

3.3 Clinical staff will:

Implement SESLHD Procedure described below and the actions required to meet the key handover interfaces listed in [Table 1](#).

Whenever possible, include the patient in the handover process.

4. PROCEDURE

Use the resources on the [Australian Commission on Safety and Quality in Healthcare website](#) to assist local assessment and implementation of the key principles for clinical handover. Monitor and evaluate local clinical handover processes in line with the key principles for clinical handover and NSQHS Standard 6 requirements.

**Clinical Handover: Implementation of ISBAR
Framework and Key Principles**

SESLHDPR/303**4.1 Clinical Handover in SESLHD**

Formal clinical handover occurs at many points in the patient journey. Staff are required to participate in an effective clinical handover using a timely, relevant and structured process that results in transfer of responsibility and accountability for care. Information handed over must be supported by documentation in the healthcare record and / or on agreed tools / templates e.g. Care Plans, Discharge Summaries and relevant eMR documents.

4.2 Communication Script

The ISBAR script ([Appendix A](#)) Introduction, Situation, Background, Assessment and Recommendation / Request is the structured framework to be used when communicating clinical handover. The ISBAR provides a framework to ensure that relevant information is effectively communicated and transfer of responsibility is undertaken.

It is recognised that the transfer of information between clinical staff of all disciplines occurs in many **informal** ways throughout the day e.g. when staff leave ward for meal breaks, when a treatment plan is updated. ISBAR is the recommended communication script for use in these situations and must also be supported by documentation in healthcare records as a record of information handed over.

4.3 Patient Identification

To ensure the identity of the patient is confirmed and to meet the requirements for the National Safety and Quality Health Service Standards Standard 6 Communication for Safety, all clinical handover situations must ensure (3-point identification with) the following patient identifiers:

- Patient's name and surname
- Date of birth
- Patient's MRN.

If one of these is not available - one of the following can be used:

- Patient's address checked against request form and patient armband
- Medicare card name check
- Veterans card check
- Passport for overseas patients
- Driver's license
- Aged care / seniors card as long as full name is on card and details match request form.

4.4 Key Interfaces

Clinical handover must be standardised to cover local purposes and be appropriate to the clinical context in which handover occurs. The following key interfaces require standardised work practices for clinical handover.

Clinical Handover: Implementation of ISBAR Framework and Key Principles

SESLHDPR/303

HANDOVER INTERFACE	ACTIONS REQUIRED
Escalation of deteriorating patient	Incorporated in: SESLHDPR/284 , SESLHDPR/697 , SESLHDPR/705 , SESLHDPR/340 .
Patient transfers to another ward	Facilities should ensure that processes are in place to support Transfer of Care, highlighting clinical handover, risk assessment and documentation.
Shift to shift change over	<ul style="list-style-type: none"> • Facilities should ensure that formalised shift to shift handover processes map to the NSW Health Key Principles/NSQHS. This includes all disciplines. • Protected handover time should be built into rosters for all disciplines where practical. Where it is not practicable an alternative handover process must be stipulated at local site level, clearly documented through a local business rule and that is compliant with NSW Health Key Principles/NSQHS Standards. • Facilities should ensure that clinical handover practice is designed within the context of patient case mix, clinical risk assessment, staffing levels, skill mix and location of work groups. • Where possible, nursing / midwifery shift to shift handover should occur face to face and in the patient’s presence (bedside handover) unless clinical risk assessment identifies unfavourable effects. Mechanisms should be used to involve the patient / carer in the clinical handover discussions where appropriate. Where handover occurs away from the bedside there must also be a visual check of the patient and their environment by the person handing over and the person taking over care. • Consider multidisciplinary involvement in shift to shift handover especially where teams are co-located. • Where there is a long overlap time between shifts there is a need to ensure that there is clear delegation of responsibility for patient care while both shifts are present. • If handover cannot happen face to face, e.g. for RMOs and allied health with patients in different wards, then other formal models should be developed to ensure effective and safe clinical handover e.g. electronic communication tools such as Journey boards.
Patient transfers for a procedure, test or appointment	<ul style="list-style-type: none"> • Facilities should ensure that processes are in place to support Transfer of Care, highlighting clinical handover, risk assessment and documentation.
Patient transfers to another hospital	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards

Clinical Handover: Implementation of ISBAR Framework and Key Principles

SESLHDPR/303

HANDOVER INTERFACE	ACTIONS REQUIRED
	<ul style="list-style-type: none"> • Use LHD tools / forms i.e. Medical transfer of Care form to document handover.
Patient transferred to another treating team	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards • Documented handover required in the healthcare record by the multidisciplinary team • Use ISBAR as core communication script and appropriate tools / forms to document handover.
RMO term changeover	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards • Use ISBAR as core communication script and local facility tools to document Clinical Handover.
Patient transfers to the community	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards • Include multidisciplinary discharge summaries and transfer forms appropriate to the clinical community setting where the patient is being transferred.
Patient transferred to Non-Government Care Provider and / or Third Party	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards • Documented handover required by the multidisciplinary team inclusive of communication of known risks to third party • When transferring care for an Aboriginal patient, an Aboriginal community controlled health service, transfer forms may require additional specific information • Use ISBAR as core communication script and local facility tools to document clinical handover.
Patient discharge (from inpatient or outpatient environment)	<ul style="list-style-type: none"> • Assess current practice against NSW Health Key Principles / NSQHS Standards • Documented handover required in the healthcare record by the multidisciplinary team • Use ISBAR as core communication script and appropriate tools / forms to document handover • Electronic discharge forms to GPs • Patient related discharge information.

Table 1 - Key interfaces

4.5 Staff Education

Ongoing training and education for clinical staff is the key to help improve and sustain clinical handover compliance. Facilities should ensure that education about clinical handover is incorporated into orientation practices in clinical departments and in regular education schedules e.g. HETI Module. The education should correlate with appropriate local business rules / guidelines specific to the clinical situation and environment. Records of attendance at training are to be maintained. All staff delivering services to Aboriginal persons should have undergone the 'Respecting the Difference' training to consider the needs of Aboriginal and Torres Strait Island people.

4.6 Consumer Participation

Clinical handover requires the active participation of patients, consumers and carers in the planning, delivery, and evaluation of the clinical handover systems. Patients are the common link in each clinical handover situation. Ensure the needs of vulnerable populations are considered for example, CALD and Aboriginal and Torres Strait Islanders. Refer to NSQHS Standard, action 6.07 - Clinical Handover.

5. DOCUMENTATION

Clinical handover should be documented in the patient's medical record. This can be completed either in eMR on paper-based forms. Listed below are some examples of forms available, though not limited to these options.

- Medical Transfer and Retrieval Checklist (NHSIS0180)
- SESLHD Pre and Post Procedure Handover (NHSIS0449)
- SESLHD Medical Transfer of Care Summary (NHSIS0154)
- SESLHD Emergency Department Clinical Handover at Transfer of Care (NHSIS0370)
- SESLHD Physiotherapy Clinical Handover / Discharge Summary (NHSIS0612)
- Transfer of Involuntary Patient between Mental Health Facilities (NH606725)
- SESLHD Residential Aged Care Facility Transfer / Discharge Summary (NHSIS0183SES)
- Podiatry Handover (NHSIS0605)
- Paediatric Handover Care Plan (NHSIS0371)
- Neonatal Transfer Summary (NHSIS0333)
- Clinical Handover at Transfer of Care (NHSIS0674)
- Occupational Therapy ISBAR Clinical Handover (NHSIS0737)
- ISBAR Diabetes Education Transfer of Care (NHSIS0742)
- Speech Pathology Transfer of Care (NHSIS0799)
- Nutrition and Dietetics Transfer of Care (NHSIS0850)

**Clinical Handover: Implementation of ISBAR
Framework and Key Principles**

SESLHDPR/303**6. GOVERNANCE**

The SESLHD Patient Safety and Quality Committee is responsible for monitoring compliance with policy and tracking trends in incidents relating to clinical handover. Each facility is required to appoint a committee / local group to monitor clinical handover processes.

Incidents resulting from inadequate handover or information sharing are notified in IMS+. Principal Incident type is Transfer of Care/Handover and Transport.

It should also be noted that communication and clinical handover are commonly identified as contributing factors to serious incidents of all principal incident types. Context specific consideration should be given to factors that influence effective communication and clinical handover such as psychological safety and clarity around roles and expectations.

6.1 Monitoring and Evaluation

Regular review of clinical handover should be performed in collaboration with managers, clinicians and consumers at ward / divisional / facility levels.

Agreed KPI are monitored and issues escalated to the SESLHD Patient Safety and Quality Committee including:

- SAER and Clinical Reviews –identified handover issues
- IMS+ reports of inadequate handover
- CERS Reviews identifying inadequate handover
- Compliance of attendance at clinical handover
- Documentation audit of clinical handover records (this should not be restricted to shift to shift nursing handover, should include transfer forms etc.)
- Observational audits of all disciplines shift to shift handover and multidisciplinary team handover
- Reports of quality activities
- Staff and patient surveys
- Patient complaints
- Patient / consumer experience survey results relating to clinician handover
- Number of staff completing handover training – orientation
- Implementation and evaluation of recommendations to address communication and clinical handover concerns

8. VERSION AND APPROVAL HISTORY

Date	Version	Version and approval notes
September 2013	1	Converted to procedure and re-formatted by Scarlett Acevedo, District Policy Officer
September 2013	2	Revised by Kim Brookes, SESLHD Patient Safety and Consumer Feedback Manager
September 2013	2	Approved by Prof George Rubin, Director Clinical Governance
November 2013	3	Added hyperlink to PACE procedure for adults and maternity inpatients
April 2015	4	References updated and endorsed by Executive Sponsor
March 2018	5	Revised by Lyn Woodhart, SESLHD Patient Safety manager and endorsed by Executive Sponsor
6 September 2024	5.1	Minor review by Ashley Azzopardi, SESLHD Clinical Governance Officer: appendix A removed, documentation section updated; minor wording changes throughout; increased emphasis on vulnerable populations in section 4.6; detail regarding principal incident type added in section 6. Approved by Executive Sponsor.

Clinical Handover: Implementation of ISBAR
Framework and Key Principles

SESLHDPR/303

Appendix A – ISBAR ‘Introduction, Situation, Background, Assessment, Recommendation’

REMEMBER

ISBAR

Clinical conversations should be clear, focussed and the information relevant.

Poor communication risks patient safety and contributes to adverse outcomes.

I – Introduction

- “I am..... (name and role)”
- “I am calling from”
- “I am calling because.....”

S – Situation

- “I have a patient (age and gender) who is
- a) stable but I have concerns
- b) unstable with rapid/slow deterioration”
- “The presenting symptoms are.....”

B – Background

- “This is on a background of.....”
- (give pertinent information which may include:
- Date of admission/ presenting symptoms/ medications/
- recent vital signs/test results/status changes)

A – Assessment

- “On the basis of the above:
- The patients’ condition is
- And they are at risk of
- And in need of”

R – Recommendation

- Be clear about what you are requesting.
- e.g. “This patient needs transfer to/review
- Under the care of.....
- In the following timeframe”
