### 1. POLICY STATEMENT

Ensuring every patient has a diet order in place in the eMR, that is in keeping with their current clinical condition and its management is critical for safe and appropriate clinical care.

Patient safety issues may arise with inadequate diet management processes. Hospital acquired malnutrition, allergic reactions, choking, anaphylaxis or aspiration are real clinical risks that may occur with inadequate service delivery across the diet management care continuum.

Every patient must have a diet order entered in eMR on admission. Diet orders are to be updated in a timely manner.

This procedure supports the directives of:

- [NSW Ministry of Health Policy Directive - PD2017\\_041 Nutrition Care](#)
- HealthShare Safety Alert SA18-001 - Not accepting food and drink orders verbally.

### 2. BACKGROUND

Nursing and medical staff are responsible for identifying and actioning patient diet orders in a timely manner to ensure that patient meals are clinically appropriate and as per prescribed treatment plan/s.

Further, diet orders must be documented in patients' medical records i.e. medico-legally they are a part of a patient's documented treatment plans.

This procedure outlines the roles and responsibilities of staff and the required process for ordering diets in eMR.

### 3. RESPONSIBILITIES

Staff Group	Patient Groups	Responsibilities
Doctors, Nurses, Midwives	All admitted patients	<ul style="list-style-type: none"> <li>• Identifying the patient's premorbid diet and food allergy on admission</li> <li>• Placing the diet order in eMR immediately</li> <li>• Documenting food allergy in eMR Allergens if required</li> <li>• Ensuring any changes to diet orders (e.g. Nil by Mouth, pre and post op protocols, etc.) are ordered in eMR immediately</li> </ul>
Dietitian, Speech Pathologists	Referred patients	<ul style="list-style-type: none"> <li>• May update diet orders when consulted</li> </ul>
Dietitian Assistants, Clinical Support Officers and Ward Clerks	All admitted patients	<ul style="list-style-type: none"> <li>• May enter/modify diet orders at the direction of members of the clinical team (i.e. Doctors, Nurse/Midwife, Dietitian, Speech Pathologist)</li> </ul>

**3.1 Staff authorised to place diet orders (defined above) will:**

- Attend eMR training as soon as practical upon commencing their duties
- Regularly review patient dietary requirements and update the eMR diet order as required
- Ensure diet orders are placed before meal cut off times wherever practical to reduce the need for late meal changes and resulting increased cost of late meals
- For diet changes made after meal cut off times, enter the eMR diet order and call the kitchen to advise of the change.

**3.2 Managers will:**

- Ensure that all staff requiring access to eMR to perform their duties will have eMR accounts created and eMR training provided in a timely manner
- Ensure that all staff that enter diet orders into eMR are orientated to the range of diets available and those most commonly used in the ward/unit/service eg 'Full', Nil by mouth, Vegetarian, Halal etc.

**4. DIET ORDERING PROCEDURE****4.1 Determining the correct diet order**

- All patients are to have their pre-morbid diet identified on admission. This should routinely include identifying any food allergies (Refer to 4.3 Food Allergy).
- Treating clinical team/s are to consider if the patient requires any dietary modifications to manage their condition or as part of their planned treatment/procedures.

**4.2 eMR Diet Order and other communications**

- The appropriate diet order is then to be entered into eMR (Orders – Diet). NB Multiple active diet orders can be entered into eMR by the 'diet modifiers' function (more than one diet modifier can be selected by holding down the control key).
- Information regarding assistance to eat requirements are mandatory for eMR diet orders
- 'Clinical history' and 'reason for cancellation' eMR fields are not mandatory fields for completing eMR diet orders
- All diet orders and food allergies should be included in nursing/midwifery clinical handover
- During the patient's admission, all diet order changes must be updated immediately in eMR. This will ensure the patient will receive the correct meal at the next meal service time.

**4.3 Food Allergy**

Any food allergies are to be entered into eMR Allergens and also the diet order, for example, patient with an egg allergy should have egg entered as an Allergen and a diet order of "egg free diet".

If there is no eMR diet order for the specific Allergen, for example, mango allergy, please call the diet office to alert them of this allergy and for further guidance.

### 4.4 Food Service management

HealthShare Food Services will not accept verbal diet orders i.e. by telephone or at the ward level. Meals will be issued by HealthShare Food Services only when there is a diet order entered in eMR.

### 5. DOCUMENTATION

Diet orders and Allergen fields are part of the patients' documented medical record.

### 6. AUDIT

Reports will be run to audit the number of patients who do not have an active diet order at meal service times. The reports will be run by the Department of Nutrition and Dietetics via CBORD, and reported to site Food and Nutrition Governance meetings.

Incidents regarding diet ordering will be reviewed at site Food and Nutrition Governance Committees and reported to SESLHD Food and Nutrition Governance Committee quarterly.
