Background

South Eastern Sydney Local Health District (SESLHD) has a wide range of population health programs and services largely located within the Directorate of Planning Population Health and Equity (DPPHE). The Directorate's Equity Strategy outlines how our services and programs will respond to its key population's health priorities needs and aligns with the District's overarching Journey to Excellence Strategy 2018-2021 and the State and Commonwealth Strategies.

A key strategy for the HIV and Related Programs (HARP) Unit, which sits within the DPPHE, is the NSW HIV Strategy released in December 2015. The Strategy's goals and targets work towards the virtual elimination of HIV transmission by 2020. As the South Eastern Sydney Local Health District, (SESLHD) NSW has approximately 40% of the population living with or seeking treatment for HIV within its borders, SESLHD's response to the challenge requires a coordinated approach and support from the Chief Executive (CE), the Directorate, the HIV and Sexual Health Service Directors, and our community partners. The HARP Unit has a long standing history and works in partnership with both the Illawarra Shoalhaven Local Health District (ISLHD) and the IBAC Unit, St Vincent's Hospital (Darlinghurst), and both provide data for inclusion in the report.

The HARP Unit Informatics team manages activity data for The Albion Centre, Prince of Wales Hospital HIV Infectious Diseases Unit, Sydney Sexual Health Centre, the Kirketon Road Centre, HIV Outreach Team, St George Waratah Clinic and St George Short St Clinic. From July 2019, services' on CHOC will have their data extracts feed directly to the EDWARD data warehouse. However, the responsibility for monthly data collection and data management remains with the HARP Unit for the purpose of data quality control (eMR error checks), performance reporting, and management of Activity Based Funding (ABF).

The HARP data report is produced bi-annually.

Objective

This report presents: (1) SESLHD HARP services progression in meeting the aims of the NSW HIV Strategy and performance measures set by NSW Health; (2) eMR CH WebNAP activity data reported to the SESLHD Business Intelligence Unit (BIEU) and relayed on to NSW Health. Additionally, data used locally to provide analysis of SESLHD HARP services performance tabled at the HIV and Sexual Health Steering Committee meeting; and, (3) Occasions of Service and number of clients by service.

Scope

Section 1 of the report covers SESLHD HARP services. Section 2 covers seven services from SESLHD; one service from ISLHD and one service from St Vincent's Health Network. Section 3 covers individual reports on all nine services.

Definitions

A **non-admitted patient (NAP)** or client of a health service facility is one who receives a service without undergoing a formal admission process.

A **non-admitted patient occasion of service (NAPOOS)** is a measure of the output for the part of the public health system that provides health care services to non-admitted patients. An **occasion of service** is any examination, consultation, treatment or other service provided by a health service provider to a patient on each occasion such service is provided.

The NSW HIV/AIDS and Sexual Health Ambulatory Care Minimum Data Set count two types of NAPOOS:

1. Individual (where a single patient or a family group receives one or more non-admitted patient services directly from any health care professional attached to a health care facility); and,
2. Non face-to-face (where the service provider and the client are in different locations during service provision, including services provided via telephone, telemedicine, case planning, case management and transport).

Abbreviations

ARV	antiretroviral
eMR	electronic medical records
eMR CH	community health eMR (also known as CHOC)
KPI	key performance indicator
MRN	medical record number
PEP	post exposure prophylaxis
POC	point of care

Summary

Key performance data

HIV testing

The 2018/19 HIV testing KPI is 27,914 tests, the same as the 2017/18 KPI and based on the target figure, not actual testing numbers.

From January to June 2019 13,424 HIV tests were performed in SESLHD (Table 1, Figure 1), an increase of 2% compared with the same period in 2018, and a 13% increase compared with July – December 2018. The total number of tests for 2018/19 is 25,310, 9% below the KPI of 27,914.

HIV treatment

The NSW HIV Strategy 2016-2020 aims to increase the proportion of people diagnosed with HIV on ART to 95%. In January to June 2019 SESLHD met this target, with 96.4% of people diagnosed with HIV on ART (Table 3)

SESLHD HARP services performance

Non-admitted patient occasions of service

There was a 14% increase in total OOS in January - June 2019 compared with July - December 2018, and a 12% increase compared with the same period last year (Table 4, Figure 2). However, for St George Waratah Clinic, OOS decreased by 48% in January to June 2019 compared with the same period last year. This is largely due to data entry issues related to eMR CH (CHOC).

Number of clients attending services

There was a 12% increase in the total number of clients attending SESLHD services in January - June 2019 compared with July - Dec 2018, and a 7% increase compared with the same period last year (Table 6, Figure 3).

Client Indigenous status

The number of Aboriginal/Torres Strait clients attending SESLHD HARP services has increased by 14% in January - June 2019 compared with July - Dec 2018, with a small increase (3%) compared with the same period last year (Table 8, Figure 5).

Occasions of service in priority populations

In January - June 2019 52% of OOS were provided to clients who reported sexual contact with the same sex, 15% to injecting drug users, 13% to sex workers and 4% to Aboriginal/Torres Strait Islanders people (Table 9).

Session type

The majority of OOS across SESLHD in the first half of 2019 were delivered face-to-face (57%), 37% via phone or letter, 4% by case management and the remainder by case conference (1%), in a group (1%) or via an "other" session type (0.5%) (Table 10).

Client country of birth

In SESLHD HARP services, the number of occasions of service by the 5 most predominant client countries of birth other than Australia, for the period January to June 2019 were England, China, Thailand, New Zealand and Brazil (which has replaced Ireland in the top 5) (Table 12, Figure 9). Compared to the previous six months, OOS have increased for clients born in China (35%), Thailand (13%) Brazil (20%) and New Zealand (2%), whilst decreasing in clients born in England (4%).

Client residence location

Consistent with the previous six months and the same period last year, over half (57%) of OOS were in clients who are residents of SESLHD, with almost 40% in clients from outside the district. Albion Centre and Sydney Sexual Health Centre continue to have the highest percentages (51% and 45% respectively) of non-SESLHD residents (Table 13, Figure 10).

Section 1

Reports SESLHD HARP services progression in meeting the aims of the NSW HIV Strategy and performance measures set by NSW Health.

HIV testing

The number of HIV tests performed by service (Table 1) and for SESLHD overall (Figure 1) for the period January 2017 - June 2019 is shown below.

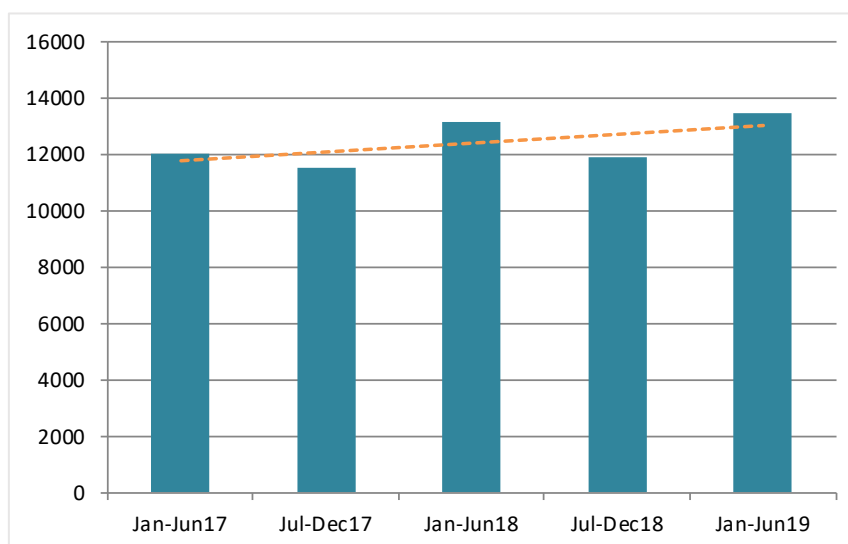

In January to June 2019 HIV testing increased by 13% compared to the previous six months and 2% compared with the same period for 2018.

Table 1
Number of HIV tests, by service (Jan 2017 –June 2019)

HIV treatment

Table 3 shows the total number of clients with HIV: being managed; on ARV in the last 12 months; not on ARV in the last 12 months, and the proportion of clients on treatment, by service, for financial year 18/19.

In June 2018 to June 2019 SESLHD met this target, with 96.4% of people diagnosed with HIV on ART

Table 3

HIV treatment status by service (June 2018–June 2019)

HIV Treatment				
	Total number of clients with HIV being managed	Number of clients with HIV on ARV in the last 12 months*	Number of clients with HIV NOT on ARV in the last 12	% of clients on treatment
The Albion Centre	1085	1069	16	98.5%
POW - HIV Ambulatory Service	80	79	1	98.8%
St George - Waratah Clinic	126	124	2	98.4%
Sydney Sexual Health Centre	511	464	47	90.8%

Total SESLHD	1923	1854	69	96.4%

* This includes patients who are on ARV all year and patients who initiated ARV in the last 12 months

** This includes patients who stopped ARV in the last 12 months; received no ARV in the last 12 months; were on ARV with 1+ breaks

Data source: HIV services data from SEALs testing data; other services data from quarterly data reported by service

SVH Hospital data unavailable at time of publication.

Section 2

Reports WebNAP activity data reported to the LHD and MoH and used locally to provide analysis of SESLHD HARP services performance.

Non-admitted patient occasions of service

The number of non-admitted patient occasions of service (hereafter referred to as 'occasions of service') provided by service (Table 4) and for SESLHD overall (Figure 2) for the period January 2017 - June 2019 is shown below.

There was a 14% increase in total OOS in January - June 2019 compared with July - December 2018, and a 12% increase compared with the same period last year

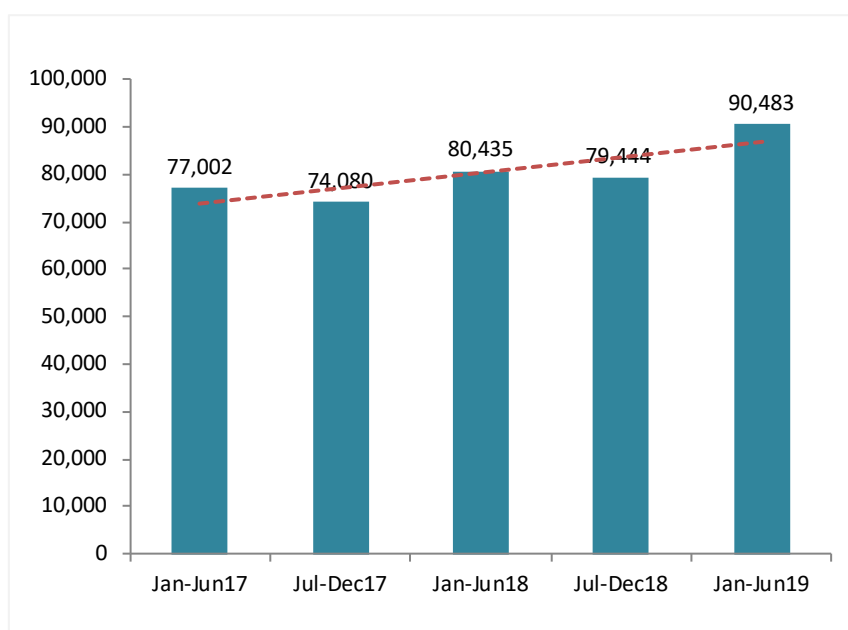

Table 4

Number of occasions of service, by service (Jan 2017–June 2019)

Figure 2

SESLHD total occasions of service (Jan 2017–June 2019)

Activity by service unit

The number of occasions of service by service unit for the period from 2016-2018 for SESLHD and ISLHD is reported in Table 5.

A non-admitted patient service unit is a team with a common clinical purpose managed by a single parent health organisation. It may: provide services at different geographical locations; consist of one or more health care providers; include health care professionals based at multiple health care sites; and/or be composed of providers paid from multiple cost centres. Each service unit has a classification with a price weight attached to each service event.

Figure 5

Number of clients' Indigenous status known/unknown

(Period: Jan 2017-June 2018)

Priority populations

The number of occasions of service for priority populations for January to June 2019 is shown below. The number of occasions of service for a priority population is also expressed as a proportion of all occasions of service. A single occasion of service may relate to (a person from) more than one priority population.

In January - June 2019 52% of OOS were provided to clients who reported sexual contact with the same sex, 15% to injecting drug users, 13% to sex workers and 4% to Aboriginal/Torres Strait Islanders people

Figures 7 & 8

Number of occasions of service, by age range and service (January – June 2019)

County of birth

For SESLHD, the number of occasions of service by client country of birth for the period 2014 – June 2019 is shown in Table 12.

In SESLHD HARP services, the number of occasions of service by the 5 most predominant client countries of birth other than Australia, for the period January to June 2019 were England, China, Thailand, New Zealand and Brazil (which has replaced Ireland in the top 5) (Table 12, Figure 9). Compared to the previous six months, OOS have increased for clients born in China (35%), Thailand (13%) Brazil (20%) and New Zealand (2%), whilst decreasing in clients born in England (4%).

Total SESLHD NAPOOS	77,002	74,080	80,435	79,444	90,483	401,444	

For SESLHD, the number of occasions of service by the 5 most predominant client county of birth other than Australia for the period January 2017 – June 2019 is shown in Figure 9.

Figure 9
SESLHD number of occasions of service by the 5 most predominant client country of birth other than Australia (Jan 2017–June 2019)

Residence location

The number of occasions of service by residence location and service (Table 13) and for SES/ISLHD overall (Figure 10) for January - June 2019 is shown below.

Consistent with the previous six months and the same period last year, over half (57%) of OOS were in clients who are residents of SESLHD, with almost 40% in clients from outside the district. Albion Centre and Sydney Sexual Health Centre continue to have the highest percentages (51% and 45% respectively) of non-SESLHD residents
