Brauer Baby Multivitamin Liquid

Newborn use only

	T.,				
Alert	Use only when Pentavite is not available. International units (IU) are labelled as units in this formulary.				
	1 microgram colecalciferol = 40 international units (or units) of vitamin D3. As nor the Australian Register of Thorapoutic Goods (ARTG) on 23/09/2024 — product doesn't contain				
	As per the Australian Register of Therapeutic Goods (ARTG) on 23/08/2024 – product doesn't contain folate.				
Indication	Routine supplementation in preterm or low birthweight infants				
marcation	Suggested age group: <37 weeks and/or birthweight <2.5 Kg.				
	Cholestasis	Weeks allay of birthweight 1215 hg.			
Action	Multivitamin supplement				
Drug type	Multivitamin				
Trade name	Brauer Baby Multivitamin Liquid				
Presentation	Oral liquid – 45mL bottle				
	Contents of Each 1 mL (as per Australian Register of Therapeutic Goods (ARTG) on 23/08/2024)				
	Betacarotene	645 microgram (107.5 microgram retinol equivalents)			
	Vitamin B1 (thiamine)	100 microgram			
	Vitamin B2 (riboflavin)	150 microgram			
	Nicotinamide	1 mg			
	Vitamin B6 (pyridoxine)	100 microgram			
	Vitamin B12 (cyanocobalamin)	417 nanogram			
	Vitamin C	7.5 mg			
	Vitamin D3 (colecalciferol)	200 units (5 microgram)			
	Vitamin E	4.04 mg			
	Choline	37.5 mg			
	Biotin	1.5 microgram			
Dose	Use only when Pentavite is not available.				
2000	•

Storage	Store below 25°C. Pro	Store below 25°C. Protect from light.			
Excipients	Ascorbyl palmitate, dl-alpha-tocopherol, gelatin, glycerol, maize oil, maize starch, potassium sorbate,			sorbate,	
	purified water, sucrose, vegetable oil, xanthan gum.				
Special comments	Brauer formula supplies betacarotene as the source of vitamin A. New labelling regulations now require the reporting of vitamin A in micrograms of Retinol Activity Equivalents (RAE). Conversion errors often occur. 1 μ g RAE = 2 μ g of supplemental β -carotene. 1 IU vitamin A (as β -carotene) = 0.6 μ g β -carotene. 4				
	Pentavite 0.45 mL Brauer 1 mL				
	Vitamin A	390 microgram			
	Betacarotene	, and the second	645 microgram

	Vit. E		4.04 mg		
	Choline		37.5 mg		
	Biotin		1.5 microgram		
Evidence	No studies were located which examined the impact of multivitamin supplementation on any outcomes in low birth weight (LBW) infants. Policy statements from organisations in developed countries recommend providing multivitamin supplementation with a neonatal multivitamin preparation containing vitamins A, D, C, B1, B2, B6, pantothenic acid and niacin to all LBW infants receiving human milk from birth until the infant attains a weight of 2000 g. Many units provide a multivitamin preparation to all LBW infants until 6 to 12 months chronological age. Vitamin D – There is evidence of reduced linear growth and increased risk of rickets in babies with a birth weight < 1500 g fed un-supplemented human milk. There is no consistent benefit of increasing the intake of vitamin D above 400 units per day. There are no clinical trial data on the effect of vitamin D on key clinical outcomes in infants with a birth weight > 1500 g.
