| SUMMARY          | This procedure has been developed to facilitate implementation of NSW Ministry of Health Policy Directive ‘Electroconvulsive Therapy: ECT Minimum Standard of Practice in NSW’ PD2011_003 and the Guidelines for ECT Minimum Standards of Practice in NSW. It is intended to describe specific procedures in several key areas of ECT practice within SESLHD. |
1. **POLICY STATEMENT**

   NSW Ministry of Health Policy Directive ‘Electroconvulsive Therapy: ECT Minimum Standard of Practice in NSW’ PD2011_003 defines minimum standards that must be met in the delivery of electroconvulsive therapy (ECT) in NSW. These standards apply to all facets of care, including the indications for treatment, potential risks and strategies to minimise them, issues of consent, facilities, anaesthesia, application of the procedure plus the required quality improvement and clinical governance framework.

2. **BACKGROUND**

   NSW Ministry of Health PD2011_003 incorporates both a set of mandatory minimum standards to be met by local health districts and a guideline that summarises evidence and makes recommendations in relation to all aspects of ECT practice. These documents were developed for implementation with an understanding that there may be variation in the structure and organisation of ECT services between local health districts. As a result, in several key areas the recommendations are broad rather than specific. Therefore, there is a need to develop specific local procedures in relation to several aspects of ECT practice, incorporating existing clinical, administrative and governance structures, to facilitate a successful implementation of the policy.

   **Definitions:**

   **Auditing an ECT service.** This refers to a system of evaluating, at intervals in time, the extent to which an ECT service adheres to, or deviates from, established guidelines and protocols. It also facilitates evaluation of the efficacy of a service, through collecting outcome data, and provides additional information regarding the tolerability of the treatment.

   **Clinical Privileging.** Clinical privileging is a process for defining the scope of clinical practice, which follows credentialing (see below). It involves delineating the extent of a medical practitioner’s clinical practice within a particular organisation or health facility, based on the individual’s credentials, competence, performance and professional suitability, and the needs and capacity of the organisation or facility to support this type of clinical practice.

   **Continuation ECT (C-ECT).** This is treatment administered following a successful course of ECT, weekly up to monthly, for up to six months after remission from acute illness is achieved. The intention is to prevent relapse.

   **Credentialing.** Credentialing refers to the formal process used to verify the qualifications, experience, professional standing and other relevant professional attributes of medical practitioners. The purpose is to form a view about the practitioner's competence, performance and professional suitability to provide safe, high quality health care services within specific organisational environments.
Index ECT. This is an acute treatment course, usually given two or three times per week, with the intention of achieving remission of symptoms.

Maintenance ECT (M-ECT). This is treatment administered at weekly to monthly intervals (and occasionally less frequently) more than six months after treatment of the acute illness. The intention is to prevent recurrence.

Monitoring an ECT service. This is a system of continuous data collection designed to detect breaches of protocol and critical incidents or failure of procedures as they occur.

3. RESPONSIBILITIES

3.1 Site ECT Chairs:
Site ECT Chairs are responsible for ensuring they are sufficiently qualified to retain their position. They also have assessment, documentation and reporting responsibilities relating to psychiatrists and psychiatry trainees who administer ECT.

3.2 Psychiatrists/Medical Officers:
All medical officers administering ECT must be adequately trained, able to demonstrate competency in performing the procedure and either have clinical privileges to administer ECT or be directly supervised by a psychiatrist with clinical privileges in ECT. They must take steps to maintain their clinical privileges in ECT and must seek a second opinion from another psychiatrist in certain circumstances. They also have responsibilities regarding the development of psychiatry trainees who wish to administer ECT.

3.3 Psychiatry Trainees:
Psychiatry trainees administering ECT must be adequately trained and be able to demonstrate competency in performing the procedure. They must ensure that they perform ECT under the supervision of a psychiatrist with clinical privileges in ECT (except in circumstances where the trainee is deemed competent to administer ECT without direct supervision according to the procedure detailed below). They must ensure that they attend the SESLHD ECT course as part of their ECT training, and must comply with relevant Royal Australian and New Zealand College of Psychiatrists (RANZCP) ECT training standards.

3.4 Medical and Nursing Staff:
All medical and nursing staff are jointly responsible for the care and clinical monitoring of patients receiving ECT.
4. PROCEDURE

4.1 ECT Credentialing and Clinical Privileging for Medical Officers

Overview and Aim

This document describes the procedure by which psychiatrists may be credentialed and then receive clinical privileges to administer ECT. It also describes the process by which psychiatry trainees may be credentialed to administer ECT. In addition, it defines a procedure for regular review of credentials and clinical privileges and the roles of site ECT Committee Chairs and Chief Psychiatrists in this process.

Initial Credentialing and Clinical Privileging for Psychiatrists

Psychiatrists can apply to be credentialed for ECT at several points during their appointment in SESLHD:

- At the commencement of employment as a staff specialist/clinical academic or a Visiting Medical Officer (VMO) contract period.
- At a routine performance appraisal.
- As the need arises within a local service (e.g., following the resignation of another ECT-privileged psychiatrist).

A psychiatrist wishing to be credentialed in ECT administration should make an application in writing to the site Chief Psychiatrist. Following this application, an evaluation of the psychiatrist’s ECT experience and knowledge should be conducted by the site ECT Chair. An assessment of the psychiatrist’s practical skills should also be carried out by the site ECT Chair or his/her delegate.

The outcome of the evaluation and assessment should be recorded on the SESLHD ECT Credentialing Evaluation Form (APPENDIX A) and SESLHD Assessment of Practical ECT Technique Form (APPENDIX B).

The site ECT Chair should then make a recommendation to the site Chief Psychiatrist regarding the applicant’s suitability for clinical privileges in ECT and copies of the forms should be submitted.

Where a psychiatrist is deemed suitable for credentialing, the Chief Psychiatrist makes a recommendation to the SESLHD MHS Medical and Dental Appointments Advisory Committee (MDAAC), then on to the SESLHD Credentialing Committee and the SESLHD MDAAC, which then grants clinical privileges for the administration of ECT.

The following diagram illustrates the process of assessment for credentialing, which occurs prior to the granting of clinical privileges.
If the outcome of an initial credentialing assessment is that the psychiatrist is deemed unsuitable for credentialing, he/she should be offered further education (e.g., attendance at an SESLHD ECT course) and/or ongoing direct supervision by a psychiatrist with clinical privileges in ECT to develop his/her skills and knowledge. He/she may then undergo a repeat assessment with the site ECT Chair.

**Review of Clinical Privileging**

In order to maintain clinical privileges in ECT, each psychiatrist must:

- Complete at least 20 ECT treatments per year, of which at least 10 are conducted by the psychiatrist himself/herself. Details of these treatments should be recorded in the SESLHD ECT Logbook (APPENDIX C) and submitted to the site ECT Chair annually.
Undergo an annual assessment of skills in ECT administration conducted by the site ECT Chair or his/her delegate. This involves the ECT Chair or delegate attending an ECT session and observing the psychiatrist administering ECT. The outcome of this assessment should be documented on the SESLHD Assessment of Practical ECT Technique Form (APPENDIX B).

Requirements for site ECT Chair

NSW ECT minimum standards require that a site ECT Chair has attended an appropriate ECT course or has obtained equivalent professional education on ECT in the previous five years.

The roles of the site ECT Chairs in relation to ECT credentialing include:

- Maintain a record of credentialed and privileged senior medical officers, including copies of SESLHD ECT Evaluation forms, SESLHD ECT Logbooks (APPENDIX C) and SESLHD Assessment of Practical ECT Technique Forms (APPENDIX B).
- Schedule and perform initial evaluations and assessments of practical ECT technique, then conduct annual reviews.
- Meet annually with the site Chief Psychiatrist to report on current accreditation status of psychiatrists administering ECT and provide copies of relevant documentation.
- Regularly report to the site ECT Committee on current credentialed psychiatrists and registrars.

Credentialing for psychiatry trainees

Whenever possible, ECT should be performed by a psychiatry trainee under the direct supervision of a psychiatrist with clinical privileges in ECT.

Although psychiatry trainees are required by the RANZCP to undergo training in ECT, completion of RANZCP requirements does not equate to credentialing to perform ECT without direct supervision within SESLHD.

Trainees may apply for credentialing for the administration of ECT within SESLHD. In these circumstances the process of evaluation and practical assessment is similar to that conducted for a psychiatrist seeking clinical privileges. Trainees must meet the same standards of knowledge and skill as a psychiatrist with clinical privileges for ECT. The site ECT Chair must be satisfied that the trainee is competent to perform ECT without direct supervision from a psychiatrist. This includes an ability to respond to unusual or complex situations in the ECT suite.

A trainee with credentials to administer ECT cannot provide ECT supervision to a trainee without credentials. In this circumstance, supervision must be provided by a psychiatrist with clinical privileges in ECT.
Trainees seeking credentials to administer ECT are required to undergo an initial credentialing assessment, including an assessment of practical ECT technique, with the site ECT Chair or his/her delegate. It is expected that all trainees attend the SESLHD ECT course prior to an application for credentials to administer ECT. The practical assessment should involve observation of enough treatments to demonstrate correct technique for all electrode placements and pulse parameter settings within SESLHD treatment guidelines. The purpose of this assessment is to ensure that the trainee is competent to administer ECT without direct consultant supervision. At least one of the observed treatments must be a stimulus titration.

The site ECT Chair must then complete the:
- SESLHD ECT Credentialing Evaluation Form (APPENDIX A).
- SESLHD Assessment of Practical ECT Technique Form (APPENDIX B).

In performing the initial ECT credentialing evaluation, the site ECT Chair should also seek, and take into account, feedback regarding the competency of the trainee from psychiatrists who have been providing ECT supervision to the trainee on a regular basis.

If a trainee is deemed competent to be credentialed to administer ECT, this must be recorded by the site ECT Chair and reported to the site Chief Psychiatrist, along with copies of the relevant documentation. This must also be tabled at the next site ECT Committee meeting.

**Review of credentialing for psychiatry trainees**

In order to maintain credentialing for ECT administration, trainees are required to:

- Undergo an annual review of their practical ECT technique, performed by the site ECT Chair or his/her delegate. This must include observation of at least one stimulus dose titration. This assessment should be documented on the SESLHD Assessment of Practical ECT Technique Form (APPENDIX B).
- Perform a minimum of 20 ECT treatments per year, all of which must be directly performed by the trainee. These treatments should be recorded in the SESLHD ECT Logbook (APPENDIX C), which should be submitted to the site ECT Chair or delegate at the annual review of practical ECT technique.

**Requirements for site ECT Chair**

The site ECT Chair is required to:

- Maintain a record of credentialed psychiatry trainees, including copies of the SESLHD ECT Credentialing Evaluation Form (APPENDIX A), SESLHD Assessment of Practical ECT Technique Form (APPENDIX B) and SESLHD ECT Logbook (APPENDIX C).
- Schedule and perform initial evaluations and assessments of practical ECT technique, plus subsequent annual assessment reviews for trainees.
• Meet annually with the site Chief Psychiatrist to report on which trainees are credentialed to administer ECT and provide copies of relevant documentation detailing annual review.
• Report regularly which trainees are credentialed to administer ECT to the site ECT Committee.

Psychiatrists and trainees who move between sites in SESLHD

Each site within SESLHD must have a system of accreditation following the same guidelines. As such it is envisaged that privileging of psychiatrists and accreditation of trainees occurs across the District and is valid for every site. Site ECT Chairs may choose to conduct an assessment of a new psychiatrist or trainee from another SESLHD site, however this would not be considered mandatory.

4.2 ECT documentation

Overview and Aim

NSW Ministry of Health PD2011_003 requires that the medical records of any patient undergoing ECT must include documentation of:

• Continuing consent to ECT.
• Results of investigations and/or anaesthetic review.
• Side effects of ECT.
• Results of mandatory cognitive testing.
• Results of symptom based objective assessments.
• Chronologically filed electroencephalography (EEG) records.

In order to standardise ECT documentation across SESLHD and streamline the process by which relevant information is recorded and located in the patient file, a new SESLHD Electroconvulsive Therapy Pack has been developed (see APPENDIX D).

Procedure

Each patient referred for ECT in SESLHD should have the following documentation completed:

• NHSIS0486 Electroconvulsive Therapy Pack (completed prior to commencing ECT).
• NHSIS0489 ECT Prescription & Record (1-12).
• NHSIS0490 ECT Prescription & Record Continuation/Maintenance (13-24).
• NHSIS0665 ECT Prescription & Record Continuation/Maintenance (Blank).
• NHSIS0491 ECT Nursing Checklist (completed prior to each treatment) (1-12).
• NHSIS0672 ECT Nursing Checklist (completed prior to each treatment) (Blank).
• NHSIS0487 ECT Pack Outcomes Review (completed at the end of Index ECT).
• NHSIS0488 Continuation/Maintenance ECT Review (completed every 3 months during C-ECT/M-ECT).

4.3 Clinical monitoring of ECT

NSW Ministry of Health PD2011_003 mandates the assessment of cognitive function prior to, during and at completion of an ECT course. In addition, it is recommended that patients who are cognitively impaired at completion of an ECT course should have a repeat cognitive assessment one month later and further assessments as clinically indicated. Several cognitive assessment tools are suggested for use in NSW Ministry of Health PD2011_003, including the Modified Mini-Mental State Examination (Modified MMSE) and Rowland Universal Dementia Assessment Scale (RUDAS).

This Policy Directive also recommends the use of structured rating scales, administered prior to ECT and at completion of an ECT course, in order to objectively assess response.

Within SESLHD it is recommended that, whenever possible, patients should undergo cognitive assessment at the following time points:
• Immediately prior to Index ECT (at baseline).
• Between treatment three and treatment six to detect early evidence of cognitive impairment and facilitate a change in technique if indicated.
• Within one week of completion of the ECT course.
• If impaired at completion of the course, then one month later.
• Additionally, as clinically indicated.

In SESLHD it is recommended that whenever possible, the Montreal Cognitive Assessment (MoC) (APPENDIX E) should be used for the assessment of ECT-related cognitive impairment. For patients from non-English speaking or limited education backgrounds, the RUDAS may be used. The Modified MMSE is freely available as a NSW Ministry of Health form and may also be used, although this is not the preferred instrument. The Mini-Mental State Examination alone is not considered an adequate tool for the assessment of ECT-related cognitive impairment.

The following symptom rating scales should be used at baseline and at the end of an ECT course to assess response:
• Montgomery Asberg Depression Rating Scale (MADRS) for patients receiving ECT for depression.
• Young Mania Rating Scale (YMRS) for patients receiving ECT for mania.
• Brief Psychiatric Rating Scale (BPRS) for patients receiving ECT for schizophrenia.
• Clinical Global Impression – Severity and Improvement (CGI-S & CGI-I) may be used in any patient receiving ECT.
• Q-LES-Q-SF, which is a self-report rating scale of quality of life. This should be completed by the patient with the assistance of his/her nurse on the day prior to ECT and on the day after completion of Index ECT.
Each of these rating scales should be available on the mental health unit that is providing ECT. Each site ECT Coordinator should have a role in ensuring that the rating scales are made available and that medical and nursing staff complete these rating scales as required. Compliance with this requirement is audited via the SESLHD Minimum Standards Audit Tools (see section below on Audit processes).

4.4 Psychiatrist second opinions in ECT

Overview and Aim

NSW Ministry of Health PD2011_003 mandates a minimum standard for review of psychiatrist decisions to prescribe ECT. The policy requires that a second opinion should be obtained from a psychiatrist experienced in ECT when:

- There is uncertainty about the recommendation for ECT.
- ECT is being considered for indications other than the standard indications listed under ‘ECT Indications’ below.

NSW Ministry of Health PD2011_003 defines a minimum standard. In SESLHD a more specific procedure for psychiatrist second opinions in relation to ECT has been developed and is detailed below.

Procedure

All psychiatrist second opinions in relation to ECT should be documented as per SESLHD Policy Directive ‘Obtaining a Second Opinion from a Consultant Psychiatrist within Acute Inpatient Mental Health Units’ SESLHDPD/269. Where a second opinion relates to the initiation of ECT, the psychiatrist providing the second opinion should complete the section on the front of the SESLHD Electroconvulsive Therapy Pack (APPENDIX D) documenting his/her name, signature and date. When reviewing an ongoing ECT prescription, if ongoing ECT is supported, the psychiatrist providing the opinion should complete the section on page 2 of the SESLHD ECT prescription form NHSIS0489, identifying the indication for the second opinion and the date upon which it was conducted (see APPENDIX D).

When should a psychiatrist second opinion be obtained? (see APPENDIX F)

ECT Indications

A second psychiatrist opinion should be obtained prior to commencing ECT when:

- ECT is being prescribed for indications other than:
  - Major depressive episode
  - Manic episode
- Mixed episode
- Schizoaffective disorder
- Catatonia
- Neuroleptic Malignant Syndrome
- Schizophrenia

- Significant co-morbidity complicates the diagnosis (e.g., in patients with possible major depression or dysthymia in the context of personality disorder or active substance abuse/dependence).
- There is uncertainty about whether ECT should be administered (e.g., when there is diagnostic uncertainty or in situations of increased anaesthetic risk).
- There is strong opposition to the administration of ECT from family/designated carer.

**Index ECT**

- A second psychiatrist opinion should be obtained if more than 12 ECT are to be given in an Index ECT course.
- A second opinion should be obtained from the site ECT Chair, or his/her delegate, if more than 20 Index ECT are to be given. The case should also be presented and discussed in a peer-reviewed context (e.g., a clinical case conference attended by peers).
- A second opinion should be considered sooner in an Index ECT course (after six to eight treatments) if there has been an inadequate response at that stage and there is uncertainty about further ECT prescription.
- In exceptional circumstances, where more than 20 Index ECT are to be given, there should be ongoing collaborative involvement of the site ECT Chair in the management of ECT. If more than 28 Index ECT are to be administered, a further opinion should be obtained either from an ECT Chair from an alternative site within SESLHD, or an academic expert in ECT.

**Continuation and Maintenance ECT**

A second psychiatrist opinion should be obtained:

- If more than 12 C-ECT/M-ECT are to be given after an Index ECT course.
- Annually for patients having M-ECT, or after every 18 treatments if this occurs within one year.

**4.5 Continuation ECT and Maintenance ECT**

**Overview and Aim**

NSW Ministry of Health PD 2011_003 mandates several key processes for prescribing and monitoring Continuation and/or Maintenance ECT. These are summarised below along with procedures for prescription, plus renewal of informed consent.
Procedure

- An identified psychiatrist must be responsible for the ongoing treatment and care of any patient receiving Continuation or Maintenance ECT (C-ECT or M-ECT). Clinical review and prescription of ECT may be delegated to a trainee psychiatrist under the supervision of the treating psychiatrist.
- Any patient receiving C-ECT or M-ECT must be reviewed by the treating psychiatrist or delegate at least once per month to assess progress and the continuing need for ECT.
- No more than three ECT treatments should be prescribed in advance for any patient receiving C-ECT or M-ECT.
- The treating psychiatrist (or his/her delegate) of any patient receiving C-ECT or M-ECT must make an entry in the file at least every six months documenting:
  - The ongoing need for ECT.
  - A discussion of treatment options, including treatment cessation, with the patient and/or family/designated carer.
- Any patient receiving C-ECT or M-ECT must have a formal pre-anaesthetic assessment completed at least every 6 months.
- Any patient receiving C-ECT or M-ECT must have a formal cognitive assessment with a standardised tool (e.g., Modified MMSE or MoCA) completed at least every three months or more often if clinically indicated.
- Patients receiving C-ECT or M-ECT who have provided informed consent should repeat the informed consent process with their treating psychiatrist or delegate every six months. Informed consent is considered valid for six months. This must be recorded on the SESLHD Continuation/Maintenance ECT Review Form, and must be available in the SESLHD Electroconvulsive Therapy Pack (APPENDIX D).

4.6 Monitoring of ECT services

Overview and Aim

NSW Ministry of Health Policy Directive PD2011_003 requires that SESLHD must establish:

- A system that monitors the achievement and maintenance of minimum standards of clinical practice across all ECT programs within its jurisdiction.
- A system of monitoring and auditing ECT services at individual hospitals.

SESLHD is then required to report against a set of key performance indicators established by NSW Health. This system works in parallel with NSW Ministry of Health Policy Directive ‘Incident Management’ PD2014_004.
Monitoring Procedure

Each site ECT Chair and ECT Coordinator should implement a system to ensure that ECT-related incidents and events are appropriately reported, recorded and responded to.

All clinicians involved in the provision of ECT are expected to document any relevant systems or individual treatment issues as per NSW Ministry of Health PD2011_003 (page 50) in the patient’s file. They should make notifications of any incidents via the Incident Information Management System (IIMS) according to NSW Ministry of Health PD2014_004. Such incidents would be reviewed according to existing mechanisms of incident review and management.

All clinicians should ensure that site ECT staff (site ECT Chair and/or ECT Coordinator) and the medical team responsible for care of the patient (trainee psychiatrist and/or psychiatrist) are notified of ECT incidents, systems or treatment issues as they arise. This is to ensure a timely response, appropriate intervention and an ongoing process of data collection in relation to ECT. Regular pathways for notification of nursing unit managers in operating theatres, recovery suites and mental health units should be followed for reporting of events related to nursing care of ECT patients. Nursing unit managers should then liaise with the treating team and site ECT Chair/Chief Psychiatrist to address issues that may arise. Data in relation to ECT incidents and events should be recorded by the ECT Coordinator and site ECT Chair and reported as a standing item to the site ECT Committee.

In circumstances where an incident or treatment event requires urgent intervention (eg, a machine malfunction) there should be a direct notification to the site ECT Chair (by phone or in person). This should be supplemented by a brief email to the site ECT Chair to enable recording of the event, with inclusion of the site ECT Coordinator and site Chief Psychiatrist in the email.

If urgent action is not thought to be required, notification should occur by email including the same recipients.

Each site ECT Chair should establish a database for recording systems or treatment issues as they occur, which is stored securely on the network drive of both the site ECT Chair and the ECT Coordinator. This database should be reported upon as a standing item at each site ECT Committee meeting, along with all IIMS reports. In addition this data should be analysed as a component of regular auditing of ECT services.

An algorithm for the monitoring procedure is outlined in APPENDIX G.

5. DOCUMENTATION

The following documents must be used to implement this procedure:

APPENDIX A: SESLHD ECT Credentialing Evaluation Form
APPENDIX B: SESLHD Assessment of Practical ECT Technique Form
APPENDIX C: SESLHD ECT Logbook
APPENDIX D: NHSIS0486 SESLHD Electroconvulsive Therapy Pack (completed prior to commencing ECT)
  NHSIS0489 ECT Prescription and Record (1-12)
  NHSIS0490 ECT Prescription and Record Continuation/Maintenance (13-24)
  NHSIS0665 ECT Prescription and Record Continuation/Maintenance (Blank)
  NHSIS0491 ECT Nursing Checklist (completed prior to each treatment) (1-12)
  NHSIS0672 ECT Nursing Checklist (completed prior to each treatment) (Blank)
  NHSIS0487 ECT Pack Outcomes Review (completed at the end of Index ECT)
  NHSIS0488 Continuation/Maintenance ECT Review (completed every 3 months during C-ECT/M-ECT)
APPENDIX E: Montreal Cognitive Assessment (MoCA)
APPENDIX F: SESLHD Guide for ECT 2nd Opinions
APPENDIX G: SESLHD Guide for Service Monitoring
APPENDIX H: SESLHD Clinical Outcomes Audit Tool
APPENDIX I: SESLHD Index ECT Compliance Audit Tool
APPENDIX J: SESLHD Continuation/Maintenance ECT Compliance Audit Tool

6. AUDIT

Each site ECT Coordinator and site ECT Chair is responsible for ensuring there is ongoing auditing of the ECT service. Results of the ECT audit should be reported annually to the site ECT Committee. The file of every patient receiving ECT should be audited and this should be a key role of the site ECT Coordinator. This data should also be provided annually to senior medical staff and managers within each ECT service and reported to the SESLHD ECT Committee.

Three ECT audit tools have been developed in SESLHD for this purpose including:
- SESLHD Clinical Outcomes Audit Tool (APPENDIX H).
- SESLHD Index ECT Compliance Audit Tool (APPENDIX I).
- SESLHD Continuation/Maintenance ECT Compliance Audit Tool (APPENDIX J).

Patient files should be audited at the following points in treatment:
- At completion of an Index ECT course (APPENDIX H and APPENDIX I).
- After six months of C-ECT or at completion of C-ECT if this occurs sooner (APPENDIX J).
- Every 12 months during a course of M-ECT (APPENDIX J).
